

The IDEXX Avian Health Profile

Diagnosing a broad spectrum of worldwide avian species

The latest in a growing menu of chemistry panels for the IDEXX VetTest[®] Chemistry Analyzer, the Avian Health Profile ensures that the most appropriate tests are run.

Economic—Contains 6 of the most commonly used chemistries

Convenient—Packaged in 4 profiles per box

Efficient—Requires only a small sample size

Flexible—Single-slide capability allows condition-specific testing and single test follow-up

The Avian Health Profile represents well-established diagnostic practices and offers the six most commonly ordered chemistries, plus calculated globulin, used for general avian health checkups and wellness screenings. Used in conjunction with the VetTest Chemistry Analyzer, the new Avian Health Profile makes for an economic and powerful diagnostic tool—for you, your customers and, more importantly, your patients.

The Avian Chemistry Profile includes:

- **ALB (Albumin)** Reduced levels of this protein, produced by the liver, can point to chronic liver, kidney, inflammatory or intestinal disease.
- **AST (Aspartate aminotransferase)** Used primarily to diagnose and monitor the course of liver disease.
- **Ca (Calcium)** Increased levels can be seen with diseases of the parathyroid gland and kidneys, or as an indicator of certain types of tumors.
- **GLU (Glucose)** High levels of glucose can indicate diabetes. Low levels can indicate liver disease, infection or certain tumors.
- **TP (Total Protein)** The level of TP can indicate a variety of conditions including dehydration, inflammation and diseases of the liver, kidneys or intestines.
- **URIC (Uric Acid)** High levels of uric acid are indicative of renal disease.
- **GLOB (Globulin)** A calculated parameter using TP and ALB to identify possible immune deficiencies, gastrointestinal loss, blood loss, chronic infection and inflammation.

VetTest avian reference ranges are for the following species:

Budgerigars
Cockatoos
Cockatiels
Canaries
Conures
Macaws
Parrots

For more information or to order, call MWI **1-800-824-3703**.

The VetTest analyzer is an integral part of the IDEXX VetLab[®] Suite of in-house analyzers. For more information, please visit <http://www.idexx.com/vettest>.

Practice what's possible[®]

VetTest[®] Chemistry Analyzer

The IDEXX Avian Health Profile is just one of several prepackaged panels for the VetTest analyzer.

Prepackaged panels offer convenience and efficiency

Avian Health Profile	Preanesthetic Panel
General Health Profile	Urine P:C Ratio
Diagnostic Health Profile	NSAID Monitoring Panel

Economical single slides provide flexibility

The VetTest analyzer continues to lead the way in flexibility and economy with single-slide testing. Use only the slides you need or customize panels for:

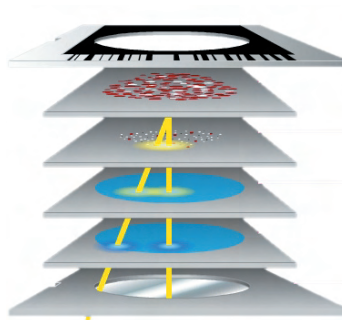

- More targeted testing
- Single-slide follow-ups and medication monitoring
- Age- and species-specific testing

ALB	AST	CK	LAC	NH ₃	TRIG
ALKP	BUN	CREA	LDH	PHOS	URIC
ALT	Ca	GGT	LIPA	TBIL	
AMYL	CHOL	GLU	Mg	TP	

Dry-slide technology

Millions of patients have already benefited from the accuracy of dry-slide technology. Animals are often ill or stressed during their visit. As a result, up to 73% of veterinary samples are compromised—lipemic, jaundiced or hemolytic. The VetTest analyzer's unique filtering layer removes these interferants to provide the most accurate in-house results available.
