

All The Power

Half The Work

Introducing Revalor[®]-XS

Never re-implant again.

Minimize labor costs and stress by saving your cattle another trip through the chute. Revalor[®]-XS delivers all the performance of reimplanting, while your cattle stay in the pen with their heads in the bunk – right where you want them.

Designed for steers fed in confinement, Revalor-XS delivers the same proven combination of trenbolone acetate and estradiol used in the Revalor-IS/S reimplant program in conjunction with new delayed-release technology. The first dose goes to work immediately, just like Revalor-IS. The second dose, shielded by the patented X7™ polymer coating, goes to work in 70 to 80 days – delivering the performance of a Revalor-S terminal implant.

Never reimplant again. Get the proven power of Revalor with just half the work.

To order Revalor-XS, contact your MWI Veterinary Supply sales representative at (800) 824-3703 or go online and order through www.mwivet.com
